

Calendar feed through iOS (iPad, iPhone, etc.)

Follow the below steps to have an internet calendar show up in the **Calendar App** of your iOS device (iPad or iPhone).

1) Tap **Settings > General > Mail, Contacts, Calendars** and finally **Add Account** :

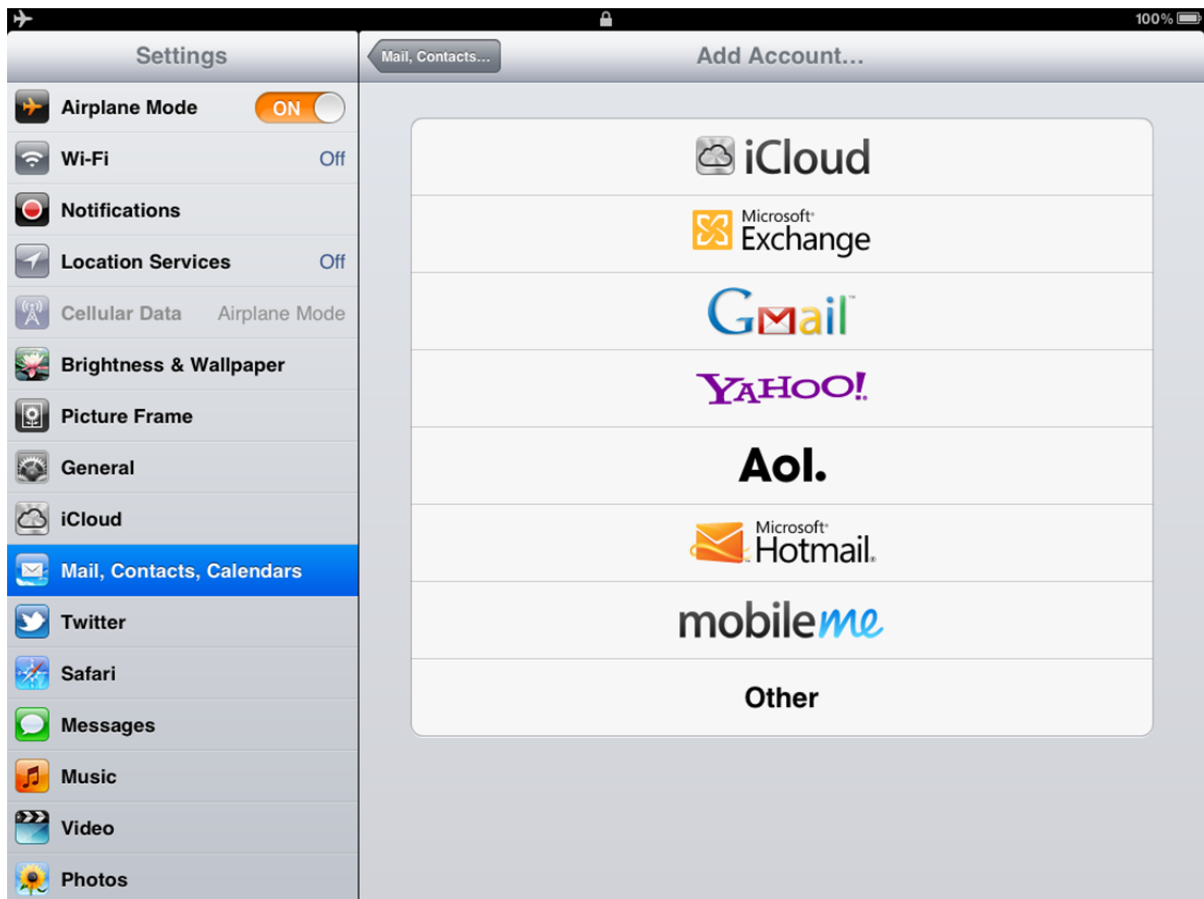

Figure 1: Add Account menu

2) Tap **Other** followed by **Add Subscribed Calendar** :

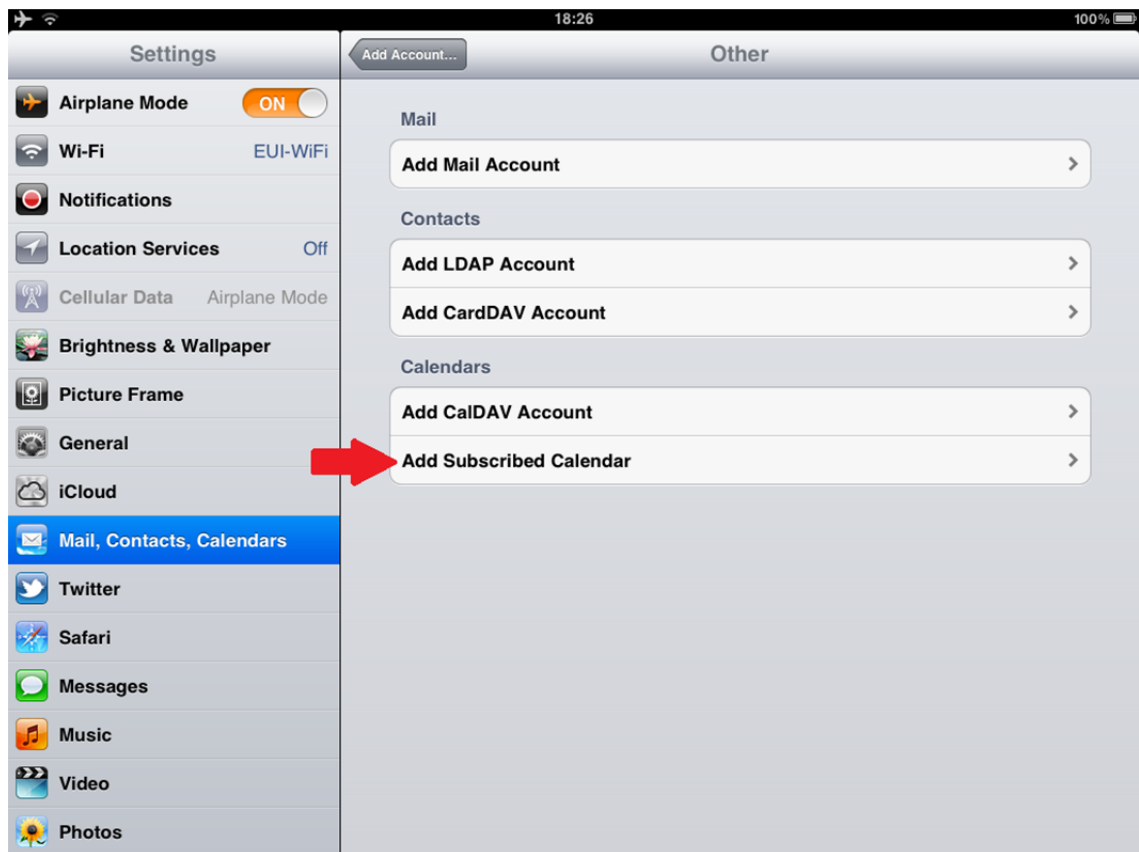

Figure 2: Add Subscribed Calendar

- 3) Paste the address (ending with .ics) of the calendar in the opening window and confirm by tapping on **Next** :

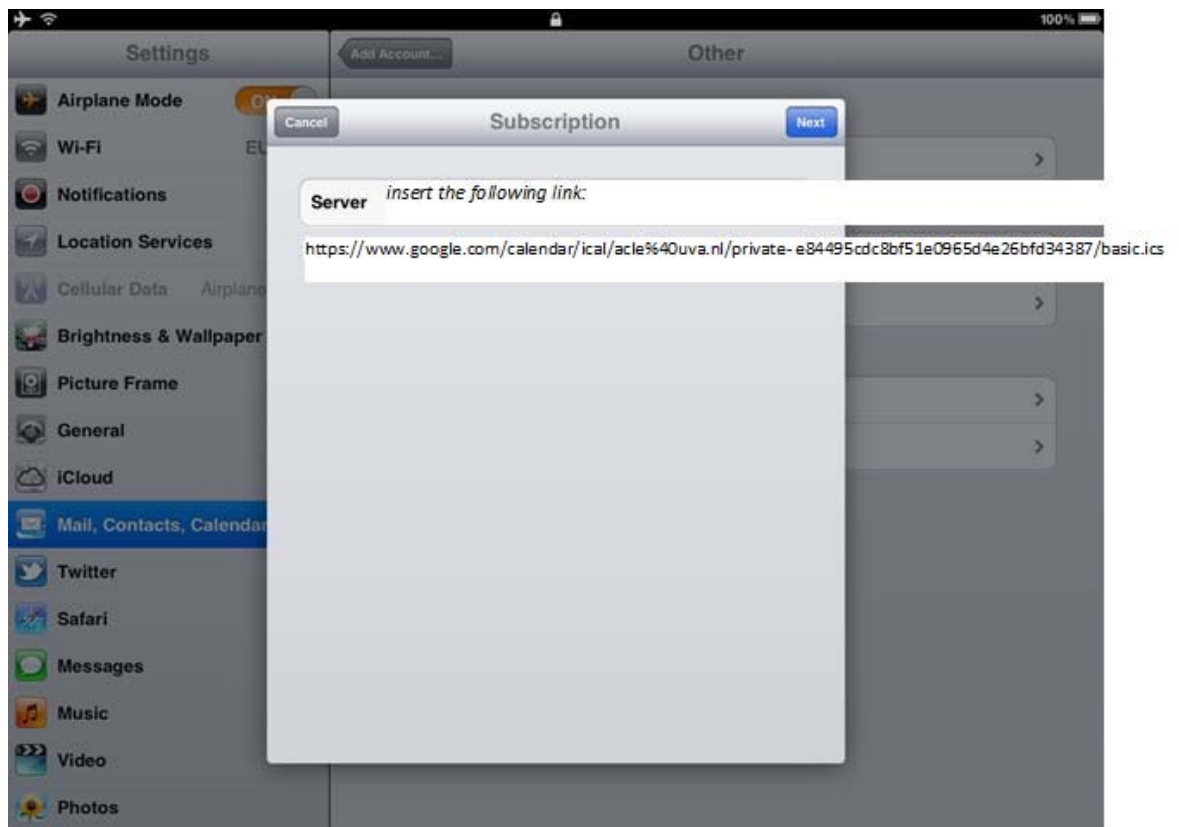

Figure 3: Adding Internet Calendar path

4. Before finishing, you can give the calendar a meaningful name in the **Description** then tap **Save** once done:

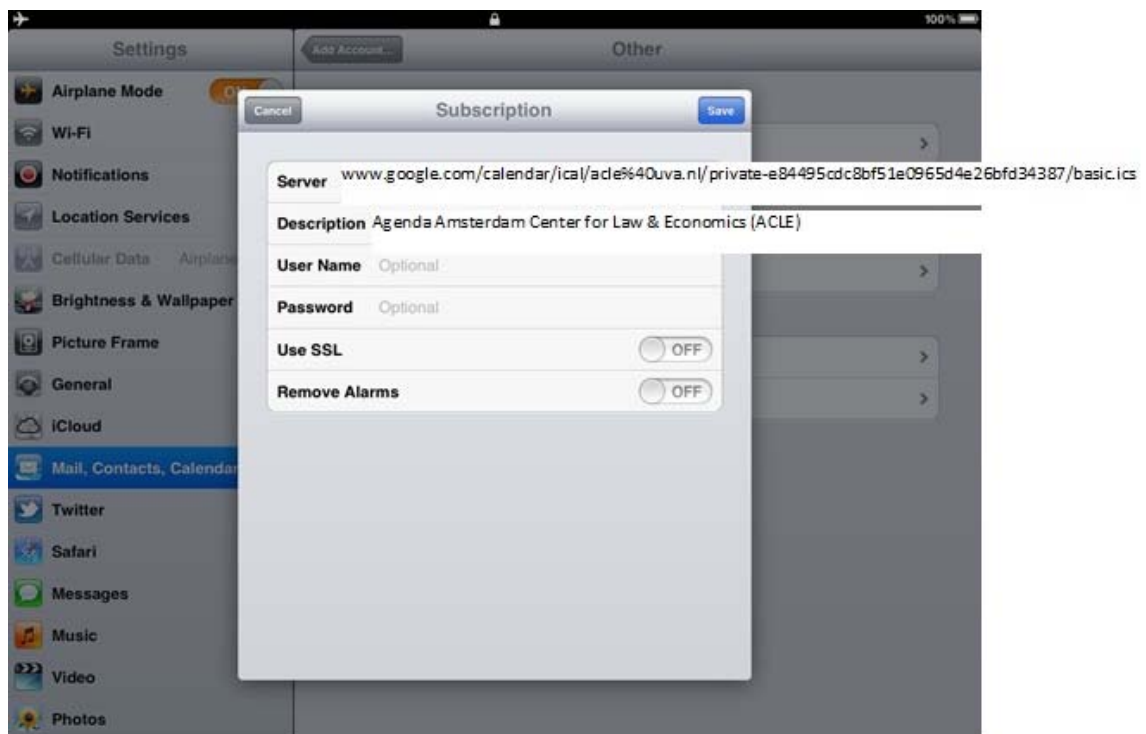

Figure 4: Providing a meaningful description

The newly added calendar will now be available in the **Calendar App** and its entries will show up with a specific colour to differentiate them from other calendar entries.

Please Note: the view will always be combined (all calendars merged into one): there is no way to split the calendars into separate ones.

By tapping on **Calendar** on the bottom menu, you can show or hide the calendar by tapping on its name and/or change its colour but tapping on the red info symbol next to it.

As you would normally do with your personal calendar, you can change among different "views" like **daily**, **weekly**, or **monthly**.
